DETAILED ACTION

Allowable Subject Matter

1. Claims 35-40 and 43-45 are allowable over the prior art of record. The following is an examiner's statement of reasons for allowance:
2. As per independent claim 43, the recited limitations pertaining to generating gaussian models associated with line spectral pairs, measuring a distance between gaussian models, and in combination with determining energy thresholds to formulate a decision as whether the frame is music, silence, or noise, is not explicitly taught by the prior art of record. Furthermore, it would not have been obvious to one of ordinary skill in the art of frame classification to modify the teachings of the prior art of record to obtain the recited limitations of the independent claims above. One example of the prior art record, Scheirer et al ("Construction and Evaluation of a Robust Multifeature Speech/Music Discriminator, 1997, IEEE, pp 1331-1334), teaches separating and extraction of frames, calculating a periodicity, and an energy calculation to discriminate frames, Nishiguchi et al (5630012) teaches splitting the audio signal into multiple bands and measuring for V/UV (col. 4 lines 25-40), using pitch bands. However, none of the prior art of record teaches the recited claim limitations above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
